Program 12

Use of Spinner widget in android application demonstration.

MainActivity.java

```
package com.example.a12spinnerwidget;
import android.os.Bundle;
import android.view.View;
import android.widget.AdapterView;
import android.widget.Spinner;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;
import android.widget.ArrayAdapter;
public class MainActivity extends AppCompatActivity {
    // these are the global variables
    Spinner classSpinner, divSpinner;
    // string variable to store selected values
    String selectedClass, selectedDiv;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity main);
        classSpinner = (Spinner) findViewById(R.id.classSpinner);
        divSpinner = (Spinner) findViewById(R.id.divSpinner);
        // Class Spinner implementing on Item Selected Listener
        classSpinner.setOnItemSelectedListener(new
AdapterView.OnItemSelectedListener() {
            @Override
            public void onItemSelected(AdapterView<?> parent, View view,
int position, long id) {
                String selectedClass =
parent.getItemAtPosition(position).toString();
                switch (selectedClass) {
                    case "Class 1":
                        // assigning div item list defined in XMLto the div
Spinner
                        divSpinner.setAdapter(new
                                ArrayAdapter<String>(MainActivity.this,
